

Weekly Changelog - 2026-03-09 to 2026-03-15

Generated: 2026-03-16 12:30:41 +02:00 Branch: Tony-dev Commit window: 2 commits Reporting scope: local git history from 2026-03-09 00:00 through 2026-03-15 23:59:59

Source Note

- 1 This weekly changelog is based on local repository history for commit 45ee5a6 on 2026-03-09 and commit 5e07fc2 on 2026-03-12.
- 1 The March 9 workflow summary is cross-checked against the existing `CHANGELOG_2026-03-09_addendum.md` file in the project root.
- 1 Where commit messages were brief, bug statements below are inferred from the changed route logic, status handling, and dashboard behavior in the diff.

Executive Summary

- 1 Strengthened reception registration and medical-aid capture workflows.
- 1 Expanded doctor, nurse, and pharmacy coordination across consultation, prescribing, and admission handoff.
- 1 Split injectable medication handling from normal pharmacy pickup so Nurse In Charge can administer injections directly.
- 1 Tightened validation, queue-state handling, and patient handoff consistency across the weekly work.

Fixes Delivered

Reception and registration workflow

- 1 Made the Register New Patient flow scrollable so longer capture sessions no longer break the form layout.
- 1 Fixed medical-aid card visibility and enablement so it responds correctly to the selected registration type.
- 1 Added medical-aid provider and cover-plan selection fields and synced member name from the patient full name.
- 1 Removed the Other gender option to align frontend capture with backend validation.
- 1 Added staff and student identity defaults plus faculty, programme, level, and semester capture fields.
- 1 Relaxed national ID validation to allow a 6-8 digit middle segment.
- 1 Improved manual date entry parsing and formatting.
- 1 Locked reception queue interactions for protected states such as checked-in, with doctor, and completed.
- 1 Added schema ensure logic and seed-data updates to support the expanded reception capture fields.

Doctor, nurse, and pharmacy workflow

- 1 Routed in-stock injectable prescriptions to Nurse In Charge using `nurse_admin_pending` instead of treating them as standard pharmacy pickup.
- 1 Kept non-injection and external medications in the pharmacy workflow.
- 1 Added dosage normalization for shorthand instructions such as `inj IV q8h x3`.
- 1 Enforced injection-order validation so route and schedule are both required before submission.
- 1 Returned routing counts from consultation completion so the UI can confirm what was sent to nurse, pharmacy, or external medication flow.
- 1 Updated doctor waiting-list filtering so work stays scoped to the assigned clinician when applicable.

Nurse operations and queue handling

- 1 Added a Nurse In Charge injection administration queue.
- 1 Added nurse-side injection administration recording, stock deduction, audit logging, and realtime events.
- 1 Added a richer nurse history view for recent vitals, visits, and prescriptions.
- 1 Updated admission handoff so patients move to `Ready for Admission` only after all medication tasks are cleared.
- 1 Updated nurse-facing wording so discharge messaging points to Nurse In Charge instead of a doctor-only path.

Pharmacy handling

- 1 Made pending-pharmacy queries resilient when queue linkage or queue status changes.
- 1 Normalized pharmacy and prescription status comparisons to lowercase so `pending`, `external`, and `dispensed` are handled consistently.
- 1 Improved medication-name fallback logic so manual and external items still appear correctly in pharmacy and claim views.

Additional workflow updates

- 1 Added external referral creation and register views in the doctor workflow.
- 1 Extended some doctor workflow access to `nurse_in_charge` where the updated process requires it.
- 1 Refreshed dashboard search behavior so nurse workflow tabs search the correct tables and lists.

Bugs Tackled Last Week

- 1 Bug: Injectable medications were mixed into the normal pharmacy pickup path.
- 1 Fix: Injectable in-stock orders now route to Nurse In Charge and remain separately trackable until administration.
- 1 Bug: Prescription and pharmacy status handling used inconsistent casing such as `Pending`, `External`, and `Dispensed`, which could hide records or block downstream transitions.
- 1 Fix: Status checks and writes were normalized with lowercase comparisons and updates.

- 1 Bug: Queue records could fail to move to Ready for Admission when medication actions completed across different workflow branches.
- 1 Fix: Remaining-medication checks now account for pharmacy pickup, external medication handling, and nurse-administered injections together.
- 1 Bug: Manual or external medication names could disappear in pharmacy views that depended only on medicine joins.
- 1 Fix: Pharmacy lookups now fall back to medication_name and notes-based values.
- 1 Bug: Reception capture had frontend and backend mismatches around gender values, medical-aid capture, national ID formats, and manual date entry.
- 1 Fix: Validation and schema support were aligned across the registration workflow.
- 1 Bug: Reception staff could still interact with queue items already in protected lifecycle states.
- 1 Fix: Protected-status interaction locks were added to the reception workflow.
- 1 Bug: Nurse discharge wording still implied a doctor-only discharge command.
- 1 Fix: The message now points to Nurse In Charge discharge flow.

Included Commits

- 1 45ee5a6 on 2026-03-09: feat: update HMS workflows and add changelog addendum
- 2 5e07fc2 on 2026-03-12: Route injection meds to nurse and keep pharmacy pickup separate

Areas Most Affected

- 1 backend/routes/reception.php
- 1 backend/utils/DbSchema.php
- 1 backend/seed_demo_data.php
- 1 backend/routes/doctor.php
- 1 backend/routes/nurse.php
- 1 backend/routes/pharmacy.php
- 1 frontend/pages/reception/dashboard.html
- 1 frontend/pages/doctor/dashboard.html
- 1 frontend/pages/nurse/dashboard.html

Closing Note

- 1 This document covers work completed during the week of 2026-03-09 through 2026-03-15.
- 1 The bug list is written to be readable by project stakeholders, but it stays grounded in the local git history and diff evidence available in this repository.
