

Changelog — 2026-02-10

Summary

This release consolidates multiple workflow improvements across Doctor, Nurse, Nurse Aid, Pharmacy, Reception, and Admin modules, introduces self-hosted fonts, standardizes notifications, adds basic monitoring/tests, and improves mobile usability.

Features

- **Nurse Aid module** with triage + daily vitals workflow and clinical notes.
- **Urgent care flow** improvements, including admission waiting list and nurse handoff.
- **Pharmacy requests** workflow for nurse → pharmacy medication pickup.
- **Self-hosted fonts** (Inter, Poppins, Roboto) and unified font family via `--app-font``.
- **Banner notifications** replacing native browser popups across the UI.
- **Monitoring**: `/health`` endpoint with DB + realtime status and a watcher script.
- **Basic test runner**: combined DB connection test + API smoke test.
- **Mobile responsive layouts** for Admin, Nurse, Nurse Aid, Doctor, Pharmacy, Reception, and IT dashboards.

Fixes

- **Doctor dashboard**: appointment handling, consult validation, and tab-driven modules consolidated in one dashboard.
- **Nurse/Nurse Aid**: validations for vitals capture and overdue status refresh.
- **Admission & discharge** flows tightened to reflect admitted patients only.
- **UI cleanup**: removal of missing action buttons, refined tab switching, and responsive table wrappers.
- **Backend cleanups**: reduced server errors in queue/bed admission operations.

Database Updates

- `patient_queue.status`` enum expanded (includes admission/urgent care states).
- `prescriptions.medicine_id`` now nullable.
- `prescriptions.status`` enum includes `External``.
- Added `pharmacy_requests`` table.
- Removed reliance on `beds.updated_at`` where it was not present.

Monitoring & Tests

- **Health endpoint**: `backend/index.php/health``
- **Watcher**: `scripts/monitor_watch.ps1``
- **Test runner**: `scripts/run_tests.ps1`` (includes `scripts/smoke_test.ps1`` + `backend/db_connection_test.php``)

Notes

- Fonts are now served locally from ``frontend/assets/fonts/`` and ``frontend/assets/css/fonts.css``.
- All modules use the unified ``--app-font`` setting.
- Native ``alert()`` calls replaced with ``notify()`` banner messages.
